U	Live Outcomes ÷ Total Outcomes		87.04%	100.00%	79.41%	100.00%	90.00%	90.13%	90.13%

Some margin of error does exist due to multiple factors. Animals intaken up to 5 months of age may change their status to be 5 months or greater moving them to another age category for their outcome status.

Admin error also exists for animals who may have an outcome deviating from their coordinating intake. For example, a "service in" (public animal status) outted as "euthanasia" (shelter animal status), rather than "service out: euthanasia" (public animal status) would affect appropriate outcome numbers. Alternatively, an animal entered under "service in: boarding" (public animal status) who is not outted as "service out:boarding" before adopting them out should an owner decided to relinquish them would affect appropriate intake numbers. All of these situations will affect appropriate beginning and ending shelter animal counts as well. The margin of error is relatively small but worth noting.

Some margin of error does exist due to multiple factors. Animals intaken up to 5 months of age may change their status to be 5 months or greater moving them to another age category for their outcome status. Admin error also exists for animals who may have an outcome deviating from their coordinating intake. For example, a "service in" (public animal status) outted as "euthanasia" (shelter animal status), rather than "service out: euthanasia" (public animal status) would affect appropriate outcome numbers. Alternatively, an animal entered under "service in: boarding" (public animal status) who is not outted as "service out:boarding" before adopting them out should an owner decided to relinquish them would affect appropriate intake numbers. All of these situations will affect appropriate beginning and ending shelter animal counts as well. The margin of error is relatively small but worth noting.
